REVISION METHODS

- Practise, practise, practise
- Create flashcards for different command words, i.e. simplify, expand, factorise. You could add examples too.
- Get to grips with the equipment you'll need in the exam. Ditch the phone and try using a scientific calculator.
- Learn the 'why' behind the formula: knowing why a formula works is more useful than trying to memorise lots of formulae, and it's better for your understanding too.
- Practise past papers under exam conditions. Remember to underline keywords in the question.
